International application No.
PCT/EP2004/000488

Bo	x No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement	
1.	Statement		
}	Novelty	ty(N) Claims 3-8, 16-19, 21-22, 26-29	YES
		Claims 1-2, 9-15, 20, 23-25, 30	NO NO
	· Inventi	ive step (IS) Claims	YES
		Claims 1-30	NO
	Industri	rial applicability (IA) Claims 1-30	YES
		Claims	
2.	Citations a	and explanations (Rule 70.7)	
	1	This report makes reference to the following	
		documents:	
		D1: DD 279 486 A (AKADEMIE DER WISSENSCHAFTEN DER	
		DDR) 6 June 1990 (1990-06-06)	
	ŕ	D2: DE 38 36 600 A (WOLFF WALSRODE AG) 3 May 1990	
		(1990-05-03)	
		D3: DE 101 26 158 A (NOVIRA CHEM GMBH)	
		12 December 2002 (2002-12-12)	
		D4: WO 03/000738 A (FRESENIUS KABI DEUTSCHLAND	
		GMBH) 3 January 2003 (2003-01-03)	
	2	Document D1 discloses (the references between	
		parentheses refer to that document) a method for	
		activating polymer compounds containing hydroxyl	
		groups and solid surfaces formed therefrom.	
		Table 6 describes the reaction of pearl cellulose	
		with symmetrical carbonates such as N, N'-	
		disuccinimidyl-carbonate (see no. 1). Starches	
		and starch hydrolysis products (see, e.g.,	
		table 10, no. 12) can be used as polymers	
		containing hydroxyl groups. Solvents such as	
		acetone or chloroform are highly suitable (see	

 citations and explanations supporting such statement
page 3). The use of the produced, activated
matrix was tested in the example relating to the
coupling of proteins such as concanavalin A. The
field of application is the chemical and
pharmaceutical industry.

## 2.1 INDEPENDENT CLAIM 1

Box No. V

Consequently, document D1 discloses all the features of independent claim 1 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;

#### 2.2 INDEPENDENT CLAIM 14

Consequently, document D1 discloses all the features of independent claim 14 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

## 2.3 INDEPENDENT CLAIM 20

Consequently, document D1 discloses all the features of independent claim 20 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

#### 2.4 INDEPENDENT CLAIM 25

Consequently, document D1 discloses all the features of independent claim 25 in combination. The subject matter of the claim thus lacks novelty

International application No.
PCT/EP2004/000488

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

(PCT Article 33(2)).

#### 2.5 INDEPENDENT CLAIM 30

Consequently, document D1 discloses all the features of independent claim 30 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

3 Document D2 discloses (the references between parentheses refer to that document) carbonic acid esters of polysaccharides with a degree of substitution of 0.5 to 3.0 and methods for the production thereof. Starches and dextrins, for example, are suitable starting materials. The reaction can be carried out with or without an additional dispersion agent. Suitable dispersion agents are inert solvents such as hydrocarbons or dimethyl acetamide. The reaction temperature preferably ranges from 20 to 90°C. polysaccharide carbonates are starting products for producing carbamates and for fixing, for example, enzymes. Example 9 discloses the reaction of starches at room temperature in pyridine and benzene with chlorocarbonic acid phenyl ester.

## 3.1 INDEPENDENT CLAIM 1

Consequently, document D2 discloses all the features of independent claim 1 in combination. The subject matter of the claim thus lacks novelty

International application No.
PCT/EP2004/000488

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

(PCT Article 33(2)).

#### 3.2 INDEPENDENT CLAIM 14

Consequently, document D2 discloses all the features of independent claim 14 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

#### 3.3 INDEPENDENT CLAIM 15

Consequently, document D2 discloses all the features of independent claim 15 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

#### 3.4 INDEPENDENT CLAIM 20

Consequently, document D2 discloses all the features of independent claim 20 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

#### 3.5 INDEPENDENT CLAIM 25

Consequently, document D2 discloses all the features of independent claim 25 in combination. The subject matter of the claim thus lacks novelty (PCT Article 33(2)).

International application No.

	ERNATIONAL PRELIMINARY REPORT ON PATENTABILITY	International application No. PCT/EP2004/000488
Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive scitations and explanations supporting such statement	step or industrial applicability;
4	DEPENDENT CLAIMS 2-13, 16-19, 21-24	, 26-29
	Claims 2-13, 16-19, 21-24 and 26-29	do not contain
	any features which, in combination	
	features of any claim to which they	•
	the PCT requirements for novelty an	
	step.	a mivencive
	5 CCp •	
	D3 discloses a polymer mixture that	is coupled
	directly to free primary amino grou	ps of proteins,
	without causing the unwanted cross-	linking of the
	proteins. Polyoxyalkylenes with re	active end
	groups are capable of chemically co	upling to a
	reactive amino-, thiol-, hydroxy- o	r carboxylate
	group of a protein or biomolecule.	A succinimidyl
	carbonate group or a succinimidyl c	arbonyl end
	group is understood by an activated	group. D4
	discloses drug forms such as antibio	otic-starch
	conjugates for antibiotics such as	amphotericin.
	Amylose and amylopectin are conside:	red as
	starches. With the preferred use of	f the
	hydroxyalkylated starches hydroxyetl	hyl starch and
	hydroxypropyl starch, the average mo	olecular weight
	can lie between 2000 and 2.106 Dalto	on.
5	Contrary to PCT Rule 5.1(a)(ii), the	e description
	does not cite documents D1 and D2 or	
	relevant prior art disclosed therein	
6	The PCT Contracting States do not ha	ave uniform
	criteria for assessing the industria	
	accounting the industria	ملد ملد م

applicability of claims 1-30 in their present

Box No. V

International application No. PCT/EP2004/000488

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement Patentability may depend on the wording of the claims. The EPO, for example, does not recognise the industrial applicability of claims to the medical use of a compound; it does, however, allow claims to the first medical use of a known compound or to the use of such a compound in the manufacture of a drug for a new medical application.
